

Veritas and Hitachi Vantara Solution Bundles for comprehensive storage management

Unify data management with an integrated solution

Software-defined, bundled solution from Veritas and Hitachi Vantara built to protect and manage valuable company data, regardless of where it resides—on-premises, virtualized, or in a private cloud.

Did you know?

- **86% of the Fortune 500** trust Veritas solutions to protect and manage their data.
- Gartner named Veritas a leader in the Magic Quadrant for Data Center Back Up and Recovery solutions **15 times in a row**.
- Veritas delivers **360-degree data management**; provides an **open, software-defined approach** to data management; focuses on **data value** instead of just data storage; delivers **performance at scale** for the virtualized enterprise; supports **one-click backup** to the cloud; and ensures predictable resiliency and availability across hybrid clouds.

Keep pace with sweeping IT changes by unifying data management

The discussion on digital transformation is no longer “if” it will happen, but “when.” Today, the vast majority of organizations are actively participating in some kind of digital transformation project such as:

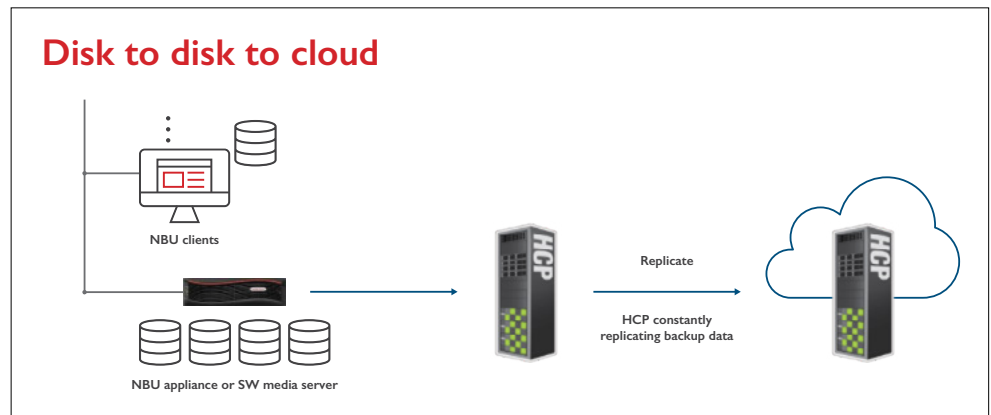

- Improving the online customer experience
- Enabling a mobile workforce
- Creating electronic supply chains

As such, IT has assumed the critical role of “business enabler,” and data has been elevated to the position of “most valuable asset,” with equivalent status shared by employees, intellectual property and capital assets.

To manage and protect data, organizations need a unified solution that works equally well across private and public cloud environments, and as physical and virtual environments. Such an enterprise data management solution must:

- Enhance data availability
- Deliver deeper insights
- Reduce acquisition costs

While many storage vendors deliver on one or two of these requirements, Veritas and Hitachi Vantara deliver on all of them. As leaders in the data management and storage industries, Veritas and Hitachi Vantara work together to provide a software-defined, technology-agnostic approach that helps protect and manage data regardless of its location—whether on-premises or in a cloud.

Comprised of Veritas NetBackup™ and Hitachi Content Platform (HCP) technologies, these solution bundles provide the features, functions and capabilities businesses need to thrive in today's data-driven environment.

Veritas NetBackup—unifying data protection

- Eliminate the complexity of point solutions and infrastructure management
- Scale gracefully to mitigate spiraling storage costs and expand into the cloud
- Deliver as-a-service capabilities to streamline operations and improve service level agreements (SLAs)
- Build an extensible foundation for enterprise data management
- Protect cloud, physical and virtual environments with a single, unified solution
- Modernize infrastructure with a converged backup platform
- Improve productivity through centralized, policy-based management
- Enable comprehensive data visualization through integration with Veritas Information Map
- Ensure robust service continuity through integration with Veritas Resiliency Platform
- Benefit from non-disruptive copy data management through integration with Veritas Velocity™
- Speed solution deployment
- Reduce risk by minimizing planned and unplanned downtime
- Improve staff efficiencies

Hitachi Vantara HCP—enabling digital transformation by bridging traditional and emerging technologies

- Support mixed workloads at petabyte scale with object storage
- Bring structure to unstructured data for deeper analysis with powerful metadata and search capabilities
- Secure data with built-in encryption
- Safeguard data with combined RAID, erasure coding, tape or optical data protection
- Tag data with metadata to manage and search trillions of file objects
- Scale cloud storage from terabytes to hundreds of petabytes
- Centralize data management to improve operational efficacy
- Speed rebuilds of large data sets with costs that compare to public cloud storage
- Control data mobility across clouds and storage tiers
- Receive multi-tenancy support
- Benefit from a powerful native REST-based interface, as well as S3 and OpenStack® Swift interfaces

Providing the full spectrum of data management capabilities

NetBackup and HCP Bundles are part of the solution portfolio created by the Veritas Global Alliance with Hitachi Vantara. These offerings are elements in the unified approach designed to address the data management and security needs of large enterprises.

With these bundles, organizations will be empowered to transform and compete in the digital age by following an open, software-defined approach to data protection and management. Companies will also gain peace of mind, knowing all data is managed by the experts at Veritas and Hitachi Vantara.

By unifying the proven capabilities of NetBackup and HCP, Veritas and Hitachi Vantara created a set of integrated data management solutions that:

- **Empowers** companies to visualize, protect, access and mobilize data.
- **Simplifies license metering** and reduces compliance risk, based on per virtual machine (VM) for virtual environments and per physical core for physical environments.
- Offers a **flexible deployment model** via combined subscription options for 12, 24 and 36 months for disaster recovery and 12 months for migration per workload.
- For older or non-NetBackup environments, provides an **easy upgrade & migration path** to the latest NetBackup functionality & scalability with HCP.
- **Delivers superior value** when bundles are purchased together versus individually.
- Enables **transformation and competition** in the digital age by freeing up IT administrators to focus on the projects that will drive business forward.
- Offers a **single package of industry-leading data management and storage solutions** customized to meet business needs.

Let's get started

[Contact](#) your Veritas or Hitachi Vantara representative today to learn how we can help transform your storage environment by unifying data management and protection across cloud, physical and virtual environments. Discover more about the advantages of deploying a comprehensive storage management solution that boosts data availability, drives deeper insights, and reduces acquisition costs.
